

Google-First Marketing Playbook For Your App

This guide breaks down exactly how to apply the Google-focused marketing strategy (from the Zero to \$40K/month case study) to your own app in clear, actionable steps. The goal: Use high-intent Google search traffic (organic + paid) to drive predictable revenue.

Step 1: Identify High-Intent Core Keywords

- List the 5–15 keywords directly tied to your core value proposition.
- Focus ONLY on buyer-intent terms (e.g., '[your tool] software', '[problem] API', '[problem] automation tool').
- Avoid broad informational keywords (e.g., 'how to improve X').
- Use tools like Ahrefs or SEMrush to find: 300–800 monthly searches, low to medium difficulty, strong commercial intent.
- Create a spreadsheet with keyword, search volume, difficulty, and intent score.
- Commit to ranking for these within 3–6 months.

Step 2: Create Bottom-of-Funnel Content & Landing Pages

- Create 10–15 high-quality pieces targeting your core keywords.
- Each keyword gets its own dedicated landing page.
- Structure pages around solving the exact search intent.
- Add a strong CTA above the fold (Free Trial / Start Now / Get API Key).
- Optimize metadata (title tags, meta descriptions, headers).
- Ensure fast load speed, mobile optimization, clean structure.
- Use internal linking between related pages.

Step 3: Launch Google Search Ads (Same Keywords)

- Open a Google Ads account.
- Create separate ad groups for each high-intent keyword cluster.
- Build a custom landing page per ad group.

- Write 3–5 ad variations focused on outcomes (not features).
- Set automated bidding with a target CPA (calculate from your LTV).
- Start with a controlled budget and monitor daily.

Step 4: Optimize and Scale What Works

- Identify keywords driving paying customers.
- Pause underperforming keywords.
- Double down on high-ROI keywords.
- Continuously A/B test headlines and landing pages.
- Increase budget monthly if return on ad spend (ROAS) stays strong.
- Feed paid data back into SEO strategy.

Step 5: Track the Math Relentlessly

- Track: Cost per acquisition (CPA), Lifetime value (LTV), ROAS, Revenue per keyword.
- Healthy CAC target: 20–40% of LTV.
- Aim to keep CAC under 30% of first-year revenue.
- Build a simple dashboard (Google Sheets or Looker Studio).
- Review metrics weekly and optimize monthly.

Core Strategic Rules To Follow

- Pick ONE growth channel (Google Search) and go deep.
- Capture existing demand — do not try to create it.
- Target intent-based queries, not informational traffic.
- Treat growth like a math problem.
- Reinvest revenue into what already works.
