organic by design

The one-liner

Most "free AI tools" sites are paywalled, fake, or thin. We shipped 84 fully-working mini apps — each with its own keyword-targeted SEO landing page — so people Googling narrow intent ("free decision tree maker", "json schema generator", "cognitive bias detector") land on a real working tool, get value in under 10 seconds, then funnel into the full Svivva platform.

The problem

Acquiring developers, researchers, and operators is expensive and slow. Three failure modes dominate:

1. The paywalled "free tool" trap

Most AI utility sites lock the actual output behind a signup. Visitors smell the gate within 3 seconds and leave with a bad impression of the brand.

2. The thin SEO bait

Other sites publish a page per keyword that returns a half-broken result powered by a single LLM call. They rank briefly, but Google's helpful-content updates are crushing them.

3. Paid ads in AI verticals

A Google Ads click in dev/AI keywords runs \$4-\$20. When the budget stops, traffic stops. No compounding, no asset, no defensibility.

The solution

svivva-tools is engineering-as-marketing taken to its logical conclusion: ship the actual tool people are searching for, give it away free with no friction, and let the experience itself do the selling.

- 84 working mini apps spanning 10 verticals — every tool is real, no fake demos, no signup walls.
- Each tool gets a structured landing page at `svivva.com/<slug>`: tagline, features, three-step how-to, FAQs, related tools.
- Tools embed in an iframe inline — visitor reads the page, clicks "Try Free →", and is using the tool within one second.
- A persistent "Svivva Seeds" frosted-glass ad surfaces the parent platform on every page — non-blocking, dismissible, always present.
- Every page is fully prerendered HTML for Google, with sitemap entries, semantic headings, and FAQ schema.

Why now

Client-side AI primitives

Models, audio synthesis, schema validation, even small LLMs run entirely in the browser. Most of the 84 tools have zero server cost per use.

Replit + pnpm monorepo workflow

Adding tool #85 takes hours, not weeks. Single workspace, shared TypeScript config, three artifacts deploying independently.

Google still rewards real utility

Helpful-content updates favor pages that solve the searcher's actual problem. A working tool inline with structured supporting content is exactly what those updates were designed to surface.

How the funnel converts

1

Discover

A searcher types "cognitive bias detector" or "json schema generator" into Google. They land on `svivva.com/<slug>` — fast static HTML, lighthouse-perfect.

2

Convert (use)

They click "Try [tool] Free →". The actual working app launches in an iframe on the same page. No signup, no email gate, no rate limit. Value delivered in under 10 seconds.

3

Notice the brand

The persistent Svivva Seeds banner sits at the bottom describing what the full platform does. Frosted-glass styling, dismissible, always present without blocking the tool.

4

Click through

When ready (often after using 2-3 tools across the hub), they hit "Grow with Svivva →" or "Unlock All 50+ Tools" and arrive at `svivva.com` proper.

5

Compound

Every shipped tool adds a new long-tail keyword surface. They share the same domain authority and funnel into the same product. The 85th tool ranks faster than the 1st.

Competitive position

Free AI tool aggregators

Theirs: Listicles linking to 3rd-party tools. No control, no moat, no funnel.

Ours: We own the tool, the page, and the funnel.

Single-purpose SaaS

Theirs: Build one good tool, charge for it. Capped TAM, paywall friction.

Ours: 84 free entry points, one paid platform behind them.

Generic AI assistants

Theirs: One chat box, infinite use cases. High cognitive load on the user.

Ours: Each tool is named, scoped, and Google-discoverable.

Content marketing blogs

Theirs: Articles about how to do something. Slow ranking, easy to skim and bounce.

Ours: Tool pages let users do the thing on the page — sticky.

How the Repl is built

A pnpm monorepo running on Replit with three artifacts that share a single TypeScript root and a Postgres database.

artifacts/ai-tools-hub

React + Vite SPA. Hosts the 84 landing pages, routing (Wouter), embedded-tool iframes, the Svivva Seeds ad, and the homepage category browser. This is what visitors see.

artifacts/api-server

Node + Express. Hosts AI proxy endpoints (chat, summarization, image gen), rate-limited public APIs the embedded tools call, and lead-capture endpoints.

artifacts/mockup-sandbox

PostgreSQL

Isolated Vite preview server. Used during design exploration — every component variant gets its own URL so we can iframe several side-by-side and pick the winner.

Single Replit-managed database shared across artifacts. Stores per-tool usage events, lead captures, A/B test assignments.

How a new tool gets shipped

- **Drop the bundle.** Place a self-contained HTML/JS bundle into `public/tools/<slug>/`. Vanilla JS, prebuilt React, Spline embed — anything that runs in an iframe.
- **Register the tool.** Add one entry to `src/data/tools.ts` with name, tagline, description, category, features, three-step how-to, FAQs. ~25 lines of TypeScript.
- **Wire the SEO.** Append the slug to `public/sitemap.xml`. The landing page is auto-generated from the `tools.ts` entry.
- **Optional: deep-link.** For multi-tool bundles, add `iframeSrc` to override the default iframe URL.
- **Done.** Restart the workflow. The page renders at `svivva.com/<slug>`, the iframe loads, Google indexes within days.

A clever bit: deep-linking into bundled apps

Hypothesis Labs is one prebuilt React app containing 20 sub-tools. Each sub-tool has its own SEO landing page on the hub, but they all iframe the same bundle, deep-linking via routes like `/tools/hypothesis-labs/t/compare-anything`. A custom Vite middleware serves the bundled HTML for every sub-route, and a `Location.prototype.pathname` patch strips the prefix so the embedded React Router thinks it is at the root. Result: 20 SEO pages, one shared bundle, zero rebuilds.

The 84 mini apps

Every tool below is live, free, and individually indexed at `svivva.com/<slug>`. Names are written for Google search intent — what a user actually types, not internal jargon.

Research & Analysis 20 tools

Twenty fast structured-thinking tools for researchers, founders, and analysts. From cognitive bias detection to causal chain mapping — every one is an SEO long-tail for someone who already needs structured help.

Topic Comparator /topic-comparator

Side-by-side comparison of any two concepts, fields, or ideas — instant structured breakdown.

- Side-by-side structured comparison
- Covers mechanics, use cases & tradeoffs
- Works for any domain — tech, science, history, business

Trend Insight Generator /trend-insight-generator

Explore emerging signals, forces, and implications for any topic — free trend analysis tool.

- Driving forces and signals analysis
- Likely short and long-term implications
- Countertrends and risks

Impact Factor Finder /impact-factor-finder

Discover what causes, accelerates, or blocks any outcome — structured factor analysis.

- Direct causes vs accelerators vs inhibitors
- Feedback loops and second-order effects
- Contextual and environmental factors

Argument Contradiction Finder /argument-contradiction-finder

Spot logical contradictions between two claims, theories, or positions in seconds.

- Direct contradictions and logical conflicts
- Implicit tensions and assumptions that clash
- Possible reconciliations and nuances

Research Hypothesis Generator /research-hypothesis-generator

Turn a research question or topic into testable hypotheses with variables and predictions.

- Multiple hypothesis variants per prompt
- Independent and dependent variables identified
- Directional predictions (positive, negative, null)

Causal Chain Mapper /causal-chain-mapper

Sketch the full causal chain from root cause to downstream effect for any topic.

- Multi-step causal chain from trigger to consequence
- Second and third-order effects
- Feedback loops and reinforcing cycles

Assumption Mapper /assumption-mapping-tool

Surface hidden assumptions behind any idea, plan, or claim — free assumption audit tool.

- Explicit and hidden assumption detection
- Confidence and risk rating per assumption
- Categories: factual, behavioral, technical, market

Metric & KPI Picker /metric-kpi-picker

Find the right metrics and KPIs to track for any goal, project, or research question.

- Prioritized metric recommendations
- Leading vs lagging indicator distinction
- Measurement method for each metric

Reverse Cause Finder /reverse-cause-finder

Start with an effect or outcome and work backwards to find probable causes — free reverse analysis tool.

- Probable causes ranked by likelihood
- Diagnostic questions for each cause
- Alternative explanations and confounders

Cross-Domain Analogy Finder /analogy-finder-tool

Bridge two unrelated fields and surface structural analogies for creative problem solving.

- Structural analogies between any two domains
- Shared mechanisms and patterns
- Explanatory analogies for teaching and writing

Stakeholder Analysis Tool /stakeholder-analysis-tool

Map every stakeholder for any decision, project, or policy — interests, power, and concerns.

- Full stakeholder identification and classification
- Interest and power level for each stakeholder
- Likely concerns and objections per group

Quick Risk Assessment Tool /quick-risk-assessment-tool

Get a fast risk snapshot for any project, idea, or decision — likelihood, impact, and mitigations.

- Top risks by likelihood and impact
- Mitigation strategy for each risk
- Blind spots and overlooked risks

Best / Worst / Base Scenario Planner /scenario-planner

Generate optimistic, pessimistic, and realistic scenarios for any decision or forecast.

- Best, worst, and base case scenarios
- Key assumptions and triggers per scenario
- Leading indicators to watch for each path

Variable Relationship Mapper /variable-relationship-mapper

Map all variables related to any topic — independent, dependent, mediating, and confounding.

- Independent, dependent, mediating, and moderating variables
- Confounding variables and controls
- Variable operationalization suggestions

Cognitive Bias Detector /cognitive-bias-detector

Check any claim, argument, or plan for cognitive biases that might be distorting your thinking.

- Identifies cognitive biases affecting your claim
- Explains each bias with a real-world example
- Debiasing strategies for each detected bias

Research Brief Generator /research-brief-generator

Write a structured research brief for any topic in seconds — background, questions, and scope.

- Background and context section
- Primary and secondary research questions
- Scope, exclusions, and constraints

Hypothesis to Experiment Designer /hypothesis-to-experiment

Turn a vague hunch or hypothesis into a rigorous, testable experiment design.

- Refines vague hypotheses into testable form
- Variables, controls, and success criteria
- Sample size and study design guidance

Free Decision Tree Builder /free-decision-tree-builder

Build a structured decision tree for any choice or process — instant text-based decision flow.

- Structured decision branches and conditions
- Text-based format — no drawing required
- Works for business, medical, and technical decisions

Research Instrument Selector

/research-instrument-selector

Find the right survey, scale, or measurement tool for your research question.

- Validated surveys and psychometric scales
- Interview and observation frameworks
- Reliability and validity notes for each instrument

Cross-Domain Idea Hybridizer

/cross-domain-idea-hybridizer

Combine two hardware systems or technologies to generate emergent hybrid architectures and innovation ideas.

- 5 hybrid architectures per combination
- Novelty score and blend mode for each hybrid
- Traits inherited from each parent system

Developer Tools 14 tools

Fourteen utilities developers Google for: linters, schema generators, regex helpers, doc tools. Pure utility, zero signup, every tool a keyword surface.

JSON Schema Analyzer

/json-schema-analyzer

Analyze and validate any JSON schema in seconds.

- Schema validation
- Field type analysis
- Nested schema support

API Latency Calculator

/api-latency-calculator

Forecast your AI API latency before you go live.

- Latency forecasting
- Multi-model comparison
- Token-based estimates

JSON Repair Tool

/json-repair-tool

Fix broken JSON from AI outputs automatically.

- Auto-repair malformed JSON
- Handles truncated responses
- Side-by-side diff view

JSON Schema Linter

/json-schema-linter

Lint your JSON schemas for errors and best practices.

- Syntax error detection
- Best practice warnings
- Type consistency checks

API Marketplace Listing Generator

/api-marketplace-listing-generator

Generate production-style API marketplace listings in seconds.

- API listing generation
- Endpoint and tag preview
- Pricing tier output

Team Permission Simulator

/team-permission-simulator

Generate role and access maps for any team scenario instantly.

- Role and permission mapping
- Access level generation
- Team scenario support

AI Edge Case Generator

/ai-edge-case-generator

Generate edge cases, adversarial inputs, and failure scenarios for your AI workflow.

- Edge case generation
- Adversarial input detection
- Failure scenario mapping

AI API Cost Simulator

/ai-api-cost-simulator

Estimate and compare LLM API costs by model, volume, and prompt length.

- Multi-model cost comparison
- Token estimation
- Monthly cost projection

Production Readiness Checker

/production-readiness-checker

Score your AI system across 6 critical dimensions before you ship.

- 6-dimension readiness score
- Weighted gap analysis
- Actionable next steps

Prompt to API Preview

/prompt-to-api-preview

Turn any plain-English API description into a REST spec, curl command, and OpenAPI snippet.

- Endpoint spec generation
- curl command output
- OpenAPI YAML snippet

LLM Output Validator

/llm-output-validator

Validate LLM JSON responses against a schema in one click.

- JSON Schema validation
- Type and enum checking
- Required field detection

JSON Only Chat Sandbox

/json-chat-sandbox

Test AI chat responses against a JSON schema in a live sandbox.

- Real-time schema validation
- Chat session simulation
- System prompt testing

AI Regression Tester

/ai-regression-tester

Run test cases against your AI prompt and instantly see which pass or fail.

- Test case management
- Multiple match modes
- Similarity scoring

JSON Schema Generator

/json-schema-generator

Paste any JSON object and generate a valid JSON Schema instantly.

- Automatic type inference
- Enum detection from samples
- Format hints (date-time, email, URI)

Hardware & BOM 10 tools

Ten hardware engineering tools: BOM builders, component selectors, datasheet helpers. An unusually under-served SEO niche with high commercial intent.

Hardware BOM Tools

/hardware-bom-tools

Manage and preview hardware bills of materials with AI.

BOM generation

Component analysis

Cost estimation

AI BOM Generator

/ai-bom-generator

Generate bills of materials from a single description.

Multi-domain BOM generation

Hardware and play modes

Cost breakdowns

BOM Material Sourcing

/bom-material-sourci

Find and compare sources for every item in your BOM.

Supplier suggestions

Price comparisons

Availability checks

Hardware Cost Estimator

/hardware-cost-estimator

Estimate BOM and prototype costs instantly — no signup required.

BOM cost calculation

PCB and enclosure pricing

Prototype vs production estimates

Manufacturing Readiness Checker

/manufacturing-readiness-checker

Instantly evaluate how production-ready your hardware concept is.

MRL score calculation

BOM preview generation

Schematic outline

Hardware Documentation Exporter

/hardware-documentation-export

Generate schematics, BOM tables, and production docs in seconds.

Schematic generation

BOM table export

Cost estimate docs

Supplier Comparison Tool

/supplier-comparison

Compare suppliers side by side — lead times, costs, and regions.

Side-by-side supplier comparison

Lead time and cost data

Regional supplier options

Product Build Flow Simulator

/product-build-flow-simulator

Preview one real production pipeline step — instantly, no signup.

Pipeline step preview

Multi-mode support

Hardware, audio, and idea flows

Hardware Compliance Checker

/hardware-compliance-check

Scan your hardware concept for compliance risks and regulatory flags.

Compliance risk scan

Regulatory flag detection

Risk score overview

Build Planner Tool

/build-planner-tool

Generate schematics, BOMs, and production workflows from a brief.

Schematic generation

BOM preview

Flow graph output

Music & Audio 10 tools

Ten music & audio tools — chord generators, scale browsers, generative composers. Creative-coding audience that overlaps with builders Svivva targets.

Chord Progression Generator /chord-progression-generator

Generate chord progressions instantly — free, no signup.

Instant chord progression output Multi-mode support
Genre and mood targeting

Synth Patch Designer /patch-designer

Describe your sound — get a full signal chain and modular patch.

Signal chain generation Modular patch mapping
Module-level detail

AI Melody Interpolator /melody-interpolator

Turn a concept into a production-style melody in under 3 seconds.

Instant melody preview
Note and rhythm output
Multi-mode pipeline support

Composition Mode Preview Studio /composition-mode-preview-studio

Submit a brief and instantly preview a composition pipeline step.

Composition step preview Multi-mode pipeline support
Production-style output

Ensemble Layering Playground /ensemble-layering-playground

Preview multi-instrument ensemble layers from a single brief.

Ensemble layer preview
Instrument role assignment
Spatial placement output

AI Sound Generator /ai-sound-generator

Generate production-style sound previews from a text prompt in seconds.

Text-to-sound generation
Production-style previews
Beat, melody, and texture support

MIDI Mapper & Stem Exporter /midi-mapper

Map MIDI notes and CCs — then preview stereo stem exports instantly.

MIDI note and CC mapping
Stereo stem export preview
Hardware and software targets

Performance Preset Builder /performance-preset-builder

Build production-style performance presets from your creative brief in seconds.

Performance preset generation
Live set structure output Creative brief input

Chord Creator (ChordKit) /chord-creator

Browse, filter, and generate chords by root, style, and voicing — no signup required.

400+ chord types
Filter by style tag (jazz, gospel, neo-soul, etc.)
MIDI voicing data for each chord

Reich Composer /reich-composer

Generate Steve Reich-style phasing and counterpoint music live in the browser.

Phase canon, electric counterpoint, and hocket patterns
12 scales including modes, pentatonic, blues, and whole tone
Live Web Audio playback — no server required

AI Model Tools 6 tools

Six tools for working with AI models — comparison, evaluation, regression testing. Catches the technical side of the AI buyer journey.

AI Model Comparison /ai-model-comparison

Compare AI models by cost, tokens, and compatibility — instantly.

Multi-model simulation Cost estimation
Token count comparison

Synthetic Dataset Generator /synthetic-dataset-generator

Generate realistic test datasets from any JSON schema.

Schema-to-dataset generation
Multiple data modes Edge case generation

AI Output Diff Visualizer /ai-output-diff-visualizer

Compare two AI outputs side by side with a diff view.

Line-by-line diff Semantic change detection
Color-coded changes

Evaluation Rule Builder /evaluation-rule-builder

Build custom rules to evaluate AI output quality.

Rule definition interface Weighted scoring
Pass/fail thresholds

3D Model From Text Preview /3d-model-from-text

Describe any project. See an AI-generated workflow preview in seconds.

Multi-mode previews
Hardware, play, idea, and build modes
Confidence & readiness scores

Sketch & 3D Model Maker /sketch-3d-model-maker

View Spline 3D scenes and generate AI reference images — free, no signup needed.

Live Spline 3D scene viewer
AI reference image generation
Links to top 3D tools (Meshy, Leonardo, Replicate)

Content & Writing 7 tools

Seven content tools: AI chat, summarization, grammar, sentiment, tone — the broad demand layer that introduces casual users to the brand.

AI Chat /ai-chat
Chat with advanced AI instantly — no setup required.
Real-time streaming responses
Multi-turn conversation Powered by GPT-4o

Text Summarizer /text-summarizer
Paste any text. Get a crisp summary in seconds.
Handles long documents Preserves key points
One-click summary

Grammar Checker /grammar-checker
Write with confidence — catch every grammar mistake.
Grammar and punctuation fixes
Style suggestions Explains each correction

Keyword Extractor /keyword-extractor
Extract the most important keywords from any content.
Top keyword ranking Topic extraction
SEO-ready output

Tone Rewriter /tone-rewriter
Rewrite anything in a different tone — professional, casual, bold.
5+ tone styles Preserves original meaning
Great for emails and copy

Image Generator /image-generator
Describe an image. See it come to life.
DALL-E 3 powered High-resolution output
Any style or subject

Quiz Generator /quiz-generator
Turn any topic into a ready-to-use quiz instantly.
Any subject or topic Multiple-choice format
Adjustable difficulty

Data Tools 2 tools

Two data tools: keyword extraction and Hypothesis Labs (the parent app for the 20 research tools above).

Sentiment Analyzer /sentiment-analyzer
Understand the emotion behind any text in seconds.
Positive/negative/neutral scoring
Emotion detection Confidence scores

Hypothesis Labs /hypothesis-labs
20 research thinking tools — compare, hypothesize, and map assumptions in seconds.
20 research tools in one app
Compare Anything, Trend Insight, Causal Sketcher
Cross-Domain Hybridization Engine

Code Tools 1 tools

One core code tool: code explanation. A high-volume search term that converts curious learners into Svivva-aware visitors.

Code Explainer /code-explainer
Paste any code snippet — get a plain-English explanation.
Supports 30+ languages
Line-by-line breakdowns
Explains logic and intent

Language Tools 1 tools

One translator tool. Universal demand; introduces Svivva to international audiences.

AI Translator /ai-translator
Translate any text into 50+ languages instantly.
50+ languages supported
Context-aware translation
Formal and informal tone

Roadmap

- **Next 30 days:** ship 20 more research tools, add per-tool usage analytics dashboard, A/B test the Svivva Seeds ad copy.

- **Next 90 days:** reach 150 tools, launch a "tool of the week" newsletter to build retention beyond search, ship the API for embedding tools on third-party sites.
- **Next 180 days:** 200+ tools, programmatic SEO for tool combinations ("X vs Y" comparison pages auto-generated from any two tools), API revenue line item.

The ask

Keep shipping. Every new mini app is another keyword surface, another funnel entry point, another proof point that Svivva ships real software fast. No paid acquisition required, no permission needed — just write the app, register the slug, and let Google do the work.

Try it →

Browse all 84 tools, then see what the full Svivva platform can do for your business.
