Scan Modes

What Is CyberWavy?

CyberWavy is a premium AI-powered cybersecurity SaaS platform with a tactile, Jonathan Ive–inspired design language. It gives developers, security teams, and founders an instant posture analysis of any web system — scanning for attack vectors, simulating breach paths, and generating auto-patch remediations — all through an iconic interactive SVG lock interface.

3-Step Flow

- 1 · Cinematic Intro !' Morphing padlock video greets the user. One tap enters the app.
- 2 · Lock Interface !' The user enters a target URL, selects scan modes, then clicks the keyhole to unlock the scan.
- 3 · Dashboard !' Real AI results appear: threat hypotheses, simulated attack paths, auto-remediations, and compliance scores.

Interactive SVG Lock — The Primary Interface

The centerpiece of the app. An SVG padlock with animated shackle, color-coded orbital scan-mode indicators, pulsing LED dot, and a clickable keyhole that triggers the AI pipeline. Rotating gear teeth and arc animations visualize live scanning progress in 5 steps.

% Surface Map Mode

Maps exposed endpoints, open ports, DNS records, and HTTP headers.

% Attack Simulate Mode

Runs a simulated adversary through discovered entry points using MITRE ATT&CK techniques.

% Comply Check Mode

Scores the target against NIST CSF, SOC 2, OWASP Top 10, and ISO 27001.

% Auto-Remediate Mode

Generates backwards-compatible patches for each identified vulnerability.

AI Pipeline (5 Steps)

- Step 1: Hypothesizing attack surface...
- Step 2: Combining threat vectors...
- Step 3: Mutating attack chains...
- Step 4: Simulating breach paths...
- Step 5: Generating remediation plan...

Security Command Center (Dashboard)

Four tabs of real AI output from every scan:

- Threats Tab: Ranked attack hypotheses with confidence scores, MITRE technique tags, and severity color-coding (Critical !' Low).
- Attack Sim Tab: Step-by-step simulated breach chain showing each pivot point an adversary would exploit.
- Remediations Tab: Auto-generated patches with one-click apply. Each fix is labelled "Auto-patch available."
- Compliance Tab: Bar meters for NIST CSF, SOC 2, OWASP, and ISO 27001 — updated after each scan.

AI Security Advisor (Chat)

Contextual Q&A powered by scan data. The advisor understands questions about fixes, attack steps, risk scores, and posture — all grounded in the specific results of the last scan. Idle state encourages running a scan. Post-scan state answers follow-up questions instantly.

Key Metrics

- 37 Security Engines — run in parallel per scan
- Security Score — 0–100 arc meter with live shadow glow
- Coverage % — surface area covered by the scan
- Critical Count — high-confidence threats (confidence > 70%)

Philosophy

Each mini app is a free, single-purpose security tool. It gives instant value — a real result the user can screenshot and share — then shows a CTA: "Get the full picture !' Run a deep scan on CyberWavy." The mini app catches the user at the top of the funnel (searching "is my site secure?") and converts them into CyberWavy signups.

1. Password Strength Tester

Rates entropy, crack time, breach exposure. CTA: scan the system using this password.

2. SSL Certificate Inspector

Check expiry, issuer, cipher strength, HSTS. CTA: full TLS posture scan.

3. Security Headers Grader

A–F grade for CSP, X-Frame, HSTS, etc. CTA: fix headers automatically with CyberWavy.

4. HTTP Headers Analyzer

Visualize raw response headers, flag missing security headers.

5. CORS Policy Checker

Test if an origin leaks cross-origin data. CTA: full API surface map.

6. URL Safety Scanner

Checks against VirusTotal + Google Safe Browsing. CTA: scan the host completely.

7. DNS Record Viewer

A/AAAA/MX/TXT/SPF/DKIM lookup with security annotations.

8. IP Reputation Checker

Lookup IP against abuse databases. CTA: see what CyberWavy finds on your infrastructure.

9. JWT Decoder & Validator

Paste a JWT — decodes header/payload, checks alg vulnerability (none/RS256 confusion).

10. Base64 / Hash Toolkit

Encode, decode, generate MD5/SHA1/SHA256. Educational; funnel to password audit.

11. Subdomain Finder (Lite)

Discover common subdomains via public DNS. CTA: full subdomain enumeration + port scan.

12. Open Port Checker (Top 20)

Check the 20 most-targeted ports. CTA: CyberWavy scans all 65535.

13. robots.txt Analyzer

Parse and highlight exposed paths. CTA: map the full attack surface.

14. sitemap.xml Parser

Extract all URLs, flag unprotected endpoints.

15. Email Breach Checker

Check email against HaveIBeenPwned. CTA: scan the associated domain.

16. GitHub Secret Scanner

Paste a public repo URL — scans for leaked API keys, tokens, passwords.

17. Cookie Security Analyzer

Inspect Secure/HttpOnly/SameSite flags. CTA: full compliance check.

18. API Key Exposure Tester

Paste a key — detects format, estimates blast radius. CTA: scan codebase.

19. TLS Version Checker

Detects SSLv3/TLS1.0 usage. CTA: remediation plan via CyberWavy.

20. Certificate Transparency Viewer

Browse cert issuance history for a domain.

21. CVSS Score Calculator

Input vulnerability parameters !' get CVSS 3.1 score + vector string.

22. OWASP Top 10 Self-Assessment

10-question quiz produces a risk rating + priority action list.

23. SQL Injection Payload Library

Browse 200+ SQLi payloads by DB type. CTA: test your DB exposure with CyberWavy.

24. XSS Payload Generator

Generate reflected/stored/DOM XSS payloads for testing.

25. Open Redirect Tester

Test a URL for open redirect vulnerabilities.

26. CSP Policy Evaluator

Paste a Content-Security-Policy header — grade it and show bypass risks.

27. Clickjacking Tester

Embed a URL in an iframe — checks X-Frame-Options enforcement.

28. SSRF Payload Builder

Generate SSRF payloads for internal network probing tests.

29. Prototype Pollution Checker

Analyze JS objects for prototype pollution risk patterns.

30. Dependency Vulnerability Lookup

Paste a package.json — checks npm packages against known CVEs.

31. NIST CSF Quick Scorecard

20 yes/no questions !' instant NIST Cybersecurity Framework gap report.

32. Zero Trust Readiness Checker

Score your org's identity, device, network, and data controls.

33. SOC 2 Readiness Checklist

Interactive checklist across all 5 trust service criteria.

34. Ransomware Risk Calculator

Estimate exposure score based on backup policy, EDR, and MFA coverage.

35. Incident Response Playbook Builder

Select incident type !' generate a step-by-step IR playbook PDF.

36. Attack Surface Calculator

Input your stack !' estimate public attack surface in sqft (visual metaphor).

37. Bug Bounty Scope Analyzer

Parse a scope file !' visualize in/out-of-scope targets on a map.

38. Security Awareness Quiz

Test employees on phishing, social engineering, and password hygiene.

39. Penetration Testing Roadmap

Answer 5 questions !' get a tailored pen-test methodology PDF.

40. Third-Party Risk Scorecard

Assess a vendor's public security posture in 2 minutes.

41. Phishing Email Analyzer

Paste email headers/body !' get phishing probability score + red flags.

42. Threat Actor Profile Lookup

Search APT groups !' see TTPs, target sectors, known CVEs.

43. Secure Password Generator

Cryptographically random; shows entropy, NIST compliance.

44. Two-Factor Auth Comparison

Compare TOTP vs SMS vs hardware key security with a decision tool.

45. AI Threat Report Summarizer

Paste any threat report text ! AI extracts IOCs, TTPs, and CVEs.

Anatomy of Each Landing Page

Each landing page is a standalone SEO-optimized page targeting a high-intent keyword. It contains: a headline matching the search query, a free interactive element (mini app embed or demo), 3 problem/solution bullet points, a "Run a Full Scan" CTA, and social proof.

1. "Is my website hackable?" — Free Instant Check
2. "Free website security scan" — No signup required
3. "Check if my API is exposed" — API surface scanner
4. "SSL certificate checker free" — Instant TLS audit
5. "Security headers test" — Grade your headers A–F
6. "Password strength test" — NIST compliant checker
7. "CORS checker online" — Test CORS misconfigurations
8. "DNS security check" — SPF, DKIM, DMARC analyzer
9. "Email breach check" — Was my email leaked?
10. "JWT token decoder" — Decode and validate JWTs
11. "What is my attack surface?" — Attack surface calculator
12. "OWASP Top 10 checklist 2025" — Free self-assessment
13. "How to prevent SQL injection" — SQLi tester + guide
14. "XSS vulnerability scanner" — Find XSS in 60 seconds
15. "CVSS score calculator" — Vulnerability severity tool
16. "Ransomware protection checklist" — Free PDF download
17. "SOC 2 readiness checklist" — Gap analysis tool
18. "NIST cybersecurity framework scorecard" — Free audit
19. "Zero trust security checklist" — Readiness assessment
20. "Penetration testing roadmap" — Step-by-step guide
21. "How to find subdomains" — Subdomain enumeration tool
22. "Open port scanner online" — Check exposed ports
23. "GitHub secrets scanner" — Find leaked API keys
24. "robots.txt security risks" — Analyzer + guide
25. "Cookie security checker" — HttpOnly, Secure, SameSite
26. "CSP policy checker" — Content Security Policy grader
27. "Clickjacking test" — X-Frame-Options checker
28. "IP address reputation check" — Abuse score lookup
29. "Certificate transparency lookup" — Cert history viewer
30. "AI cybersecurity tool" — AI-powered security scanner
31. "Bug bounty scope analyzer" — Scope file parser
32. "Phishing email checker" — Email header analyzer
33. "Third-party vendor security check" — Risk scorecard
34. "Incident response plan generator" — Free playbook
35. "Security awareness quiz for employees" — Free test
36. "Two-factor authentication comparison" — 2FA guide
37. "Secure password generator" — Cryptographic randomness
38. "Threat actor database" — APT group profiles
39. "CVE lookup tool" — Search known vulnerabilities
40. "npm package vulnerability scanner" — Dependency audit
41. "Open redirect vulnerability checker" — SSRF tester
42. "Prototype pollution scanner" — JS security checker
43. "TLS version checker" — Detect old SSL/TLS
44. "Attack simulation tool free" — Breach path visualizer
45. "AI threat report summarizer" — Extract IOCs instantly

```

Each mini app and landing page is a standalone Vite + React app.
Each has its own package.json, vite.config.js, index.html, and src/App.jsx.

MINI APP SPECS (build all 45)

Each mini app must:

1. Deliver a REAL, working result (no placeholder outputs)
2. Use only browser APIs or free public APIs (no API keys required)
3. Show a result score, grade, or finding – something shareable
4. End with the CyberWavyCTA component
5. Be completable in under 60 seconds by the user
6. Show a loading spinner during analysis
7. Be fully mobile-responsive

Mini apps to build (in order):

1. Password Strength Tester
2. SSL Certificate Inspector
3. Security Headers Grader
4. HTTP Headers Analyzer
5. CORS Policy Checker
6. URL Safety Scanner
7. DNS Record Viewer
8. IP Reputation Checker
9. JWT Decoder & Validator
10. Base64 / Hash Toolkit
11. Subdomain Finder (Lite)
12. Open Port Checker (Top 20)
13. robots.txt Analyzer
14. sitemap.xml Parser
15. Email Breach Checker
16. GitHub Secret Scanner
17. Cookie Security Analyzer
18. API Key Exposure Tester
19. TLS Version Checker
20. Certificate Transparency Viewer
21. CVSS Score Calculator
22. OWASP Top 10 Self-Assessment
23. SQL Injection Payload Library
24. XSS Payload Generator
25. Open Redirect Tester
26. CSP Policy Evaluator
27. Clickjacking Tester
28. SSRF Payload Builder
29. Prototype Pollution Checker
30. Dependency Vulnerability Lookup
31. NIST CSF Quick Scorecard
32. Zero Trust Readiness Checker
33. SOC 2 Readiness Checklist
34. Ransomware Risk Calculator
35. Incident Response Playbook Builder
36. Attack Surface Calculator
37. Bug Bounty Scope Analyzer
38. Security Awareness Quiz

39. Penetration Testing Roadmap
40. Third-Party Risk Scorecard
41. Phishing Email Analyzer
42. Threat Actor Profile Lookup
43. Secure Password Generator
44. Two-Factor Auth Comparison
45. AI Threat Report Summarizer

LANDING PAGE SPECS (build all 45)

Each landing page must:

1. Have an H1 that exactly matches the target keyword
2. Embed the related mini app (or a simplified inline version)
3. Include: Problem section (3 bullets), Solution section, How It Works (3 steps)
4. Include the CyberWavyCTA at the top AND bottom
5. Have a meta description optimized for the keyword
6. Be statically renderable (no server required – Vite build)
7. Include Open Graph tags for social sharing

Landing pages to build (keyword != slug):

1. "Is my website hackable?" != is-my-website-hackable
2. "Free website security scan" != free-website-security-scan
3. "Check if my API is exposed" != api-exposure-checker
4. "SSL certificate checker free" != ssl-certificate-checker
5. "Security headers test" != security-headers-test
6. "Password strength test" != password-strength-test
7. "CORS checker online" != cors-checker
8. "DNS security check" != dns-security-check
9. "Email breach check" != email-breach-check
10. "JWT token decoder" != jwt-decoder
11. "What is my attack surface?" != attack-surface-calculator
12. "OWASP Top 10 checklist 2025" != owasp-top-10-checklist
13. "How to prevent SQL injection" != sql-injection-prevention
14. "XSS vulnerability scanner" != xss-scanner
15. "CVSS score calculator" != cvss-calculator
16. "Ransomware protection checklist" != ransomware-protection
17. "SOC 2 readiness checklist" != soc2-readiness
18. "NIST cybersecurity framework scorecard" != nist-scorecard
19. "Zero trust security checklist" != zero-trust-checklist
20. "Penetration testing roadmap" != pentest-roadmap
21. "How to find subdomains" != subdomain-finder
22. "Open port scanner online" != port-scanner
23. "GitHub secrets scanner" != github-secrets-scanner
24. "robots.txt security risks" != robots-txt-analyzer
25. "Cookie security checker" != cookie-security-checker
26. "CSP policy checker" != csp-checker
27. "Clickjacking test" != clickjacking-test
28. "IP address reputation check" != ip-reputation-checker
29. "Certificate transparency lookup" != cert-transparency
30. "AI cybersecurity tool" != ai-cybersecurity-tool
31. "Bug bounty scope analyzer" != bug-bounty-scope
32. "Phishing email checker" != phishing-email-checker
33. "Third-party vendor security check" != vendor-risk-scorecard
34. "Incident response plan generator" != ir-plan-generator
35. "Security awareness quiz" != security-awareness-quiz
36. "Two-factor authentication comparison" != 2fa-comparison
37. "Secure password generator" != password-generator
38. "Threat actor database" != threat-actor-lookup
39. "CVE lookup tool" != cve-lookup
40. "npm vulnerability scanner" != npm-audit-tool
41. "Open redirect vulnerability checker" != open-redirect-tester
42. "Prototype pollution scanner" != prototype-pollution
43. "TLS version checker" != tls-version-checker
44. "Attack simulation tool free" != attack-simulation
45. "AI threat report summarizer" != threat-report-summarizer

START HERE

1. Create the shared/ folder with theme.css, CyberWavyCTA.jsx, and NavBar.jsx
2. Scaffold all 45 mini-apps with a working Vite + React setup
3. Build each mini app fully – real functionality, not placeholders
4. Scaffold all 45 landing pages
5. Build each landing page with SEO meta, embedded tool, and CTA
6. Create a root index.html that links to all 90 apps as a launch hub
7. Add a README.md with deployment instructions for Vercel/Netlify

Build everything. Do not stop until all 90 apps are complete.

Where to Deploy

- Vercel: Free tier. Each mini app as a separate Vercel project. Set custom subdomain: `ssl.cyberwavysecurity.com`, `cors.cyberwavysecurity.com`, etc.
- Netlify: Same approach. Free CDN. Deploy with: `netlify deploy --prod --dir=dist`
- Cloudflare Pages: Best performance. Free. Supports 500 sites on one account.

SEO Quick Wins

- Submit all 45 landing page URLs to Google Search Console on day 1.
- Add internal links between related tools (e.g. SSL checker !' TLS version checker !' CyberWavy).
- Add schema.org SoftwareApplication markup to each mini app.
- Share 3 mini apps per week on Reddit (r/netsec, r/webdev, r/cybersecurity). Free traffic.
- Post results screenshots on Twitter/X — "I just checked 100k sites and 67% fail this one test."
- Target long-tail keywords — they convert 3x better than broad terms.
- Add an email capture ("Get a free full report PDF") before showing results.

Conversion Optimization

- Gate the 2nd scan behind a free signup — first scan always free.
- Show a teaser result: "We found 3 issues. Sign in to see all 11."
- Add a "Share my results" button — viral loop.
- Show the CyberWavy lock animation on every CTA block — brand recognition.
- A/B test: "Run Full Scan" vs "Protect My Site" as CTA copy.

Revenue Model Integration

- Free Tier: All 45 mini apps free forever. No login needed.
- Starter (\$29/mo): 5 full CyberWavy scans/month, PDF reports, email alerts.
- Pro (\$79/mo): Unlimited scans, API access, team seats, CI/CD integration.
- Enterprise: Custom pricing, on-prem, SSO, dedicated AI pipeline.
