

PYRACRYPT × SVIVVA

Growth, Cross-Linking & Traffic Strategy

Orbit Community · Product Hunt · Reddit · Cross-Promo

Confidential Strategy Document · April 2026
cyberwavysecurity.replit.app

This document maps the full growth plan for the Pyracrypt + Svivva ecosystem: how to cross-link the two products, build an Orbit community, launch on Product Hunt, drive organic traffic via Reddit and SEO, and convert visitors into paying subscribers — using predominantly free or low-cost tactics.

THE ECOSYSTEM VISION

You have two products — **Pyracrypt** (AI-powered cybersecurity SaaS) and **Svivva** (your second Replit app). Rather than marketing each in isolation, the plan is to make them a *linked ecosystem* where each product feeds users to the other. This is the same strategy used by Notion + Cron, Linear + Plain, and Vercel + Next.js — complementary tools that share an audience.

The Orbit (orbit.love) is the community layer that sits above both products, turning users into advocates who drive word-of-mouth growth automatically.

Ecosystem Architecture

Layer	Tool	Role
Product A	Pyracrypt	AI cybersecurity scan — flagship, technical depth
Product B	Svivva	Companion app — serves adjacent user need
Community	Orbit (orbit.love)	Aggregates users across both products, scores engagement
Cross-link	Shared CTA blocks	Each app has a banner linking to the other
Funnel	Email / Discord	Captures leads from both products in one place

STEP-BY-STEP: LINK PYRACRYPT TO SVIVVA

Step 1 — Add Cross-Promo Strip to Both Apps

Each deployed app should have a thin cross-promotion banner visible in the footer (or as a non-intrusive top bar) that links to the other product. This has already been added to Pyracrypt's footer in this update. For Svivva, add the matching block:

- **Pyracrypt footer strip:** "Also by the same team → Svivva [link]"
- **Svivva footer strip:** "Secure your stack with Pyracrypt — AI threat detection [link]"
- Use consistent brand colors across both so visitors immediately recognise the ecosystem

Step 2 — Shared UTM Tracking

Append UTM parameters to every cross-link so you know exactly how much traffic each app sends to the other. Use these URL patterns:

- Pyracrypt → Svivva: `?utm_source=pyracrypt&utm_medium=footer&utm_campaign=ecosystem`

- Svivva → Pyracrypt: ?utm_source=svivva&utm_medium=footer&utm_campaign=ecosystem
- Track these in Google Analytics (free) or Plausible (privacy-first, cheap)

Step 3 — Shared Email Capture

Both apps should funnel email signups to the *same* email list (e.g. Mailchimp free tier — up to 500 contacts). Tag subscribers by which app they came from. This gives you one audience you can market both products to.

- Add a "Get security alerts" email capture form to the Pyracrypt homepage
- Add a matching "Stay in the loop" form to Svivva
- Use one Mailchimp audience with tags: pyracrypt_signup, svivva_signup

Step 4 — Deploy Both Apps on Replit

For production traffic you need both apps deployed (not just running in dev). Replit Deployments give you a stable .replit.app URL + SSL + global CDN. Steps:

- In Replit: click **Deploy** on each Repl → choose "Autoscale" for traffic spikes
- Pyracrypt is already deployed at cyberwavysecurity.replit.app — verify it's live
- Deploy Svivva the same way — go to its Repl, click Deploy → note its .replit.app URL
- Update the cross-links in both apps with the final production URLs

SECTION 3

ORBIT COMMUNITY SETUP (ORBIT.LOVE)

Orbit is a free community-growth platform that tracks member engagement across GitHub, Discord, Twitter/X, Reddit and more — then scores each member by their "orbit level" (from casual observer to active champion). This is your community OS that makes word-of-mouth trackable and scalable.

Why Orbit for Svivva?

Orbit had 566% revenue growth by using its own model before being acquired by Postman. The free tier supports up to 1,000 members across 2 integration sources — more than enough to start.

Setup Checklist

#	Action	Time
1	Create free account at orbit.love	5 min
2	Create workspace: "Svivva Community" (or "Pyracrypt + Svivva")	5 min
3	Connect GitHub (if you have a repo) as first data source	5 min
4	Connect Discord or Slack as second data source (see Section 4)	10 min
5	Set up custom activity types: "Signed up for Pyracrypt", "Visited Svivva"	10 min

6	Add Orbit API webhook to both Replit apps to log signups as activities	30 min
7	Create a "Champions Program" in Orbit for your top 10 early users	15 min

The 4 Orbit Member Levels

- **O4 Observers** — newsletter subs, visitors, social followers. Goal: convert to O3
- **O3 Participants** — people who tried a free scan, joined Discord, commented on Reddit
- **O2 Contributors** — active community members, left reviews, shared on social
- **O1 Advocates** — power users who champion your product; give them early access & perks

Focus all energy on moving people *up* the orbit levels. O1 advocates will generate more signups than any paid ad campaign.

TRAFFIC CHANNELS — RANKED BY IMPACT

1. Reddit — Free, High-Converting, SEO-Boosting

Reddit posts rank on Google. A single well-crafted post in *r/netsec* or *r/cybersecurity* can bring hundreds of targeted visitors in 24 hours, and the post keeps ranking in search results for months.

- **Subreddits to target:** *r/netsec*, *r/cybersecurity*, *r/sysadmin*, *r/selfhosted*, *r/SaaS*, *r/EntrepreneurRideAlong*, *r/InternetIsBeautiful*
- **Best post format:** "I built [X] to solve [Y problem I had] — here's what I learned" — transparent, founder story, genuine
- **Avoid:** direct promotion, link-first posts. Lead with value (free tool, data, insight)
- **Frequency:** 2–3 helpful comments per day in target subs; 1 original post per week
- **Golden rule:** 80% give value, 20% mention your product

2. Product Hunt — One Big Launch Moment

After the Jan 2024 algorithm change, only 10% of launches get featured. But even non-featured launches get a DR91 backlink and 100–500 targeted visitors.

- **Pre-launch (4 weeks out):** build your PH following — follow other makers, comment daily
- **Hunter:** find an established PH hunter with 500+ followers to hunt your product
- **Launch day:** Tuesday–Thursday, post at 12:01am PT; mobilise your network for first-hour upvotes
- **Launch both products separately** — Pyracrypt first, then Svivva 4–6 weeks later
- **Each launch page** should mention the other product with a link

3. SEO Content — Compound Traffic Over Time

- Target long-tail: "free attack surface scanner", "AI vulnerability detector online", "CSRF scanner tool"
- Publish one blog post per week: threat breakdowns, compliance guides (SOC 2, HIPAA, NIS2)
- Use your Hybrid OR threat data (10 hacking methods, social engineering table) as landing page content
- Each blog post ends with a CTA to try Pyracrypt free scan

4. Hacker News — High Signal, Niche Audience

- Post "Show HN: I built an AI attack surface mapper" — be technical, honest about limitations
- Best for developer/security audience; rarely converts to paid immediately but great for credibility
- Use the feedback as product research

5. Twitter/X & LinkedIn

- Daily: share 1 cybersecurity tip, fact, or mini threat analysis (no links in first comment)
- Weekly: post your Pyracrypt scan results as anonymised case studies

- LinkedIn: target CISOs and IT managers with thought leadership posts
- Twitter: engage with security researchers — quote-tweet CVE announcements with your analysis

6. Free Tool Strategy (Freemium Fear Hook)

The #1 growth hack for cybersecurity SaaS: offer a free, instant scan. Pyracrypt already does this — maximize it.

- Add "Try a free scan — no signup required" as the primary CTA on the homepage
- After the scan completes, gate the full report behind an email signup
- This converts "free users" into leads you can nurture into paid subscribers
- Goal: 100 free scans/week → 10 email captures → 1 paid subscriber per week to start

7. Discord Community

- Create a free Discord server: "Pyracrypt Security Hub"
- Channels: #general, #threat-intel, #scan-results, #pyracrypt-help, #svivva
- Invite early users; share exclusive threat intel content there first
- Connect Discord to Orbit to track engagement automatically

MONETIZATION — HOW TO MAKE MONEY

Pricing Tiers

Tier	Price	What's Included	Goal
Free	\$0/mo	1 scan/day, surface scan only, basic report	Build audience
Starter	\$19/mo	Unlimited scans, all 5 modes incl. Hybrid OR, email reports	First revenue
Pro	\$49/mo	API access, scheduled scans, team seats (3), compliance reports	SMB market
Business	\$149/mo	Unlimited seats, white-label, SLA, priority support	Enterprise

Revenue Milestones

- **Month 1–2:** 0 paid, 50 free users. Focus: product quality, first Reddit post
- **Month 3:** 5 Starter subs = \$95/mo MRR. Milestone: first real revenue
- **Month 6:** 25 Starter + 5 Pro = \$720/mo MRR. Launch Svivva with cross-promo
- **Month 12:** 60 Starter + 20 Pro + 3 Business = \$2,627/mo MRR. Product Hunt launch

Additional Revenue Streams

- **Affiliate program:** 20% recurring commission for referrals — your users become salespeople
- **Security reports:** sell custom one-time "deep scan reports" for \$199 each
- **API access:** charge developers who want to embed your scan engine (\$99/mo)
- **Consultancy upsell:** offer 1-hour "security review calls" at \$150/hr for Pro+ users

30 / 60 / 90 DAY ACTION ROADMAP

Days 1–30: Foundation

Week	Action	Priority
Week 1	Deploy Svivva on Replit. Add cross-promo CTAs to both apps. Set up UTM links.	■ Critical
Week 1	Create orbit.love workspace. Connect GitHub + Discord. Import first users.	■ Critical
Week 2	Create Discord server "Pyracrypt Security Hub". Invite 10 beta users personally.	■ High
Week 2	Set up free Mailchimp list. Add email capture to both apps.	■ High
Week 3	Post "Show HN" on Hacker News. Engage with all comments for 48h.	■ High
Week 3	Write and post first Reddit thread in r/netsec (founder story format).	■ High
Week 4	Enable Stripe payments. Launch Starter tier. DM your 10 beta users about paid.	■ Medium

Days 31–60: Growth Engine

- Post 2x/week on Reddit. Comment daily in r/cybersecurity, r/netsec, r/sysadmin
- Publish 4 SEO blog posts using the threat data already in the app (10 hacking methods, social engineering)
- Start building PH presence: follow 20 makers/week, comment on 3 launches/day
- Reach out to 5 micro-influencers in cybersecurity (Twitter/YouTube) for organic mentions
- Launch affiliate program (20% recurring). Add referral link to dashboard for every user

Days 61–90: Scale & Launch

- Product Hunt launch for Pyracrypt: coordinate upvotes from Discord community + email list
- Svivva Product Hunt launch 3 weeks after Pyracrypt
- Cross-promote both launches to each other's user bases
- Apply to be listed on G2, Capterra, and Trustpilot (free listings). Ask users for reviews
- Submit to AWS Marketplace if Pyracrypt has an API — massive enterprise discovery
- Target: 25 paid subscribers by Day 90

IN-APP CHANGES ALREADY MADE + NEXT STEPS

Changes Made in This Update

- **Pyracrypt footer:** Added Svivva cross-promotion strip with link and brand styling
- **Hybrid OR mode:** 5th scan mode added to the lock — "Social + Technical OR" detection combining technical attack vectors (SQL injection, XSS, CSRF, XXE) AND social engineering threats (phishing, vishing, deepfakes)
- **Hybrid OR dashboard tab:** Full threat matrix showing both technical and social attack categories with severity ratings

Next Technical Changes to Make

- **Email capture modal:** After a free scan completes, show a modal: "Your full report is ready — enter your email to download it"
- **Pricing page:** Add a /pricing route with the 4-tier table and Stripe payment links
- **Svivva cross-link:** Once Svivva is deployed, update the footer link with its real .replit.app URL
- **Orbit webhook:** When a user completes a scan, POST to the Orbit API to log the activity and track community engagement
- **Share button:** After scan completes, add "Share your security score" button that generates a Twitter/X card with the score — viral loop
- **Referral system:** Each user gets a unique referral link; when a referral signs up, both get 1 month free

Quick Wins (Under 1 Hour Each)

Change	Impact	Effort
Add "Share score" button to dashboard	Viral coefficient increase	30 min
Email capture after scan	Lead generation	45 min
Add Pyracrypt to free directories (Futurepedia, There's An AI For That)	SEO backlinks + discovery	1 hr
Post in r/InternetIsBeautiful	100–500 targeted visitors	20 min
Create a free G2 listing	Social proof + discovery	30 min
Submit to Futurepedia as AI security tool	AI tool directory traffic	15 min
