

SVIVVA

AI API Builder & Innovation Platform

Complete Feature Reference Guide

svivva.com

1. CORE PLATFORM — Prompt-to-API Engine

Prompt-to-API Generation

Transform natural language descriptions into fully functional, production-ready AI API endpoints. No coding required — describe what you want and Svivva builds it.

Schema Enforcement

Strict JSON Schema validation on every API response with AI-powered auto-repair. Guarantees 100% valid, structured output every time.

Auto-Generated Evaluations

AI automatically creates 50–200 diverse test cases per endpoint, covering edge cases, adversarial inputs, and boundary conditions for comprehensive quality assurance.

Version Control & Instant Rollback

Every modification creates a new version with full history. Automated rollback triggers when evaluation pass rates drop below configured thresholds.

2. API MANAGEMENT

OpenAPI Export

Automatically generates OpenAPI 3.0 specifications for seamless integration with any API ecosystem, documentation tools, or third-party platforms.

SDK Generation

Auto-generates client SDKs for Python and Node.js, giving developers plug-and-play code to integrate Svivva APIs into their applications.

API Key Management

Secure API key creation, rotation, and revocation. Manage access credentials with full audit trails.

Real-Time Usage Monitoring

Live analytics dashboard tracking latency, cost, error rates, and token usage. Configurable alerts via email/Slack and webhooks for API events.

Instant Deployment

Deploy API endpoints in seconds with auto-scaling infrastructure. Zero configuration required — handles any load automatically.

3. NEURAL AI PIPELINE

Prompt Optimization

AI analyzes and improves system prompts for better accuracy, consistency, and performance. Suggests rewrites with measurable quality improvements.

Schema Enhancement

AI-powered suggestions for refining output schemas — tighter validation, better field naming, and improved data structures.

Quality Gate

Automatic confidence scoring for every API output. Flags low-confidence responses before they reach end users.

Training Augmentation

Synthetic data generation using five distinct strategies to expand training datasets. Improves model performance without manual data collection.

Anomaly Detection

AI-driven identification of failure patterns in API logs. Surfaces recurring issues, edge case clusters, and degradation trends.

4. ADVANCED AI TOOLS

A/B Testing

Split traffic between different prompt versions to compare performance. Data-driven decisions about which prompts work best in production.

Fine-Tuning Pipeline

Train custom AI models directly within the platform using your accumulated data and evaluation results.

Cost Optimizer

AI-powered model suggestions and budget capping. Automatically recommends cheaper models that maintain quality thresholds.

Chaos Mode

Adversarial stress testing that bombards your API with edge cases, malformed inputs, and extreme scenarios. Produces a resilience score.

Prompt Breeding

Genetic evolution of prompts — combines the best-performing versions to create optimized offspring prompts through iterative selection.

API Autopsy

Forensic analysis of API failures. Traces root causes across the full pipeline — prompt, schema, model, and infrastructure layers.

5. COLLABORATION & MARKETPLACE

Team Management

Role-based access control with four permission levels: Owner, Admin, Member, and Viewer. Full team collaboration on API projects.

API Marketplace

Publish, discover, and monetize AI APIs. List your endpoints for others to use, or browse the marketplace for pre-built solutions.

6. IDEA ENGINE

AI-powered discovery of untapped business opportunities across digital and physical product categories.

- Multi-stage pipeline: Market Scan !' Gap Analysis !' Idea Generation !' Scoring
- Generates 6 novel ideas per session with novelty, revenue, and feasibility scores
- Identifies market gaps and competitive insights
- Supports industry filtering and custom context
- Stores session history for revisiting past discoveries

7. SVIVVA PLAY — AI Music Instrument

A standalone AI-powered music production instrument built into the platform with professional-grade sound synthesis.

6 Performance Modes

- Composition — AI-assisted song creation and arrangement
- Interpolation — Morph between sounds and musical ideas in real time
- Chord Player — Intelligent chord voicing and progression generator
- Solo Prompt — Describe a sound in natural language, hear it instantly
- Patch Creator — Design custom synthesizer patches with AI guidance
- Ensemble — Layer and orchestrate multiple AI instruments together

Built on Tone.js sound engine with neural audio infrastructure, MIDI support, and export capabilities.

8. PHYSICAL / HARDWARE SIDE

Svivva's physical platform mirrors the digital side, enabling hardware prototyping and manufacturing.

- AI-generated schematics and technical specifications
- Smart material sourcing with supplier network integration
- 3D model generation from descriptions
- Real-time budget tracking and cost estimation
- Bill of materials (BOM) management
- Production-ready documentation export

9. THE B.U.I.L.D. SYSTEM

Svivva's 5-step guided process — Bring Users Into Logical Delivery — takes projects from concept to completion on both digital and physical sides.

Digital Flow

- Step 1: Define — Describe your API in natural language
- Step 2: Configure — Set schema, parameters, and constraints
- Step 3: Evaluate — Auto-generated tests validate quality
- Step 4: Deploy — One-click production deployment
- Step 5: Monitor — Live performance tracking and alerts

Physical Flow

- Step 1: Describe — Define your hardware product concept
- Step 2: Design — AI generates schematics and specs
- Step 3: Source — Smart material and supplier matching
- Step 4: Budget — Real-time cost tracking and optimization
- Step 5: Manufacture — Production-ready documentation

10. PRICING TIERS

Free — \$0

- Digital + Physical access
- 3 API endpoints / 2 hardware projects
- 1,000 API requests/month
- Basic schematics export
- Svivva Play — limited access
- Community support

Pro — \$49/month

- Digital + Physical unlimited
- Unlimited API endpoints & hardware projects
- 100,000 API requests/month
- AI material sourcing & 3D model generation
- Svivva Play — full access
- Auto-rollback & versioning
- Priority support

Enterprise — \$299/month

- Everything in Pro
- Unlimited API requests
- Dedicated supplier network
- SSO & SAML
- Custom integrations & SLA guarantee
