

S V I V V A

Your Launch Plan

What to do right now.

No tech background needed. Just follow the steps.

hello@svivva.com | April 2026

STOP BEING SCARED

Here is what you have already built. Most people never get this far.

- A fully working SaaS platform — AI API builder, hardware builder, marketplace
- Automated evaluation engine that tests your APIs for you
- Version control with instant rollback — safer than most enterprise tools
- SEO blog, tool pages, and landing pages — already live and indexed
- APEX: your API auto-improves itself from real traffic (nobody else has built this)
- Shareable API cards + public live endpoints anyone can call right now
- Stripe payments connected and ready to charge customers
- Svivva Play music tool as a bonus product
- Seeds — multi-app generator that spins up full product suites from a single PDF
- Mini apps ecosystem pointing traffic back to Svivva

You are not "not ready." You are afraid. That is normal. The only cure is launching.

BEFORE YOU RE-DEPLOY — CHECKLIST

Must do first (each takes under 10 minutes):

- Re-deploy the app so you get a fresh working URL
- Test that /blog, /tools, and /lp pages load without requiring a login
- Do a real Stripe test payment to confirm money can flow
- Confirm hello@svivva.com is receiving emails
- Set SITE_PASSWORD in your environment secrets (or remove the gate so anyone can visit)

Nice to have (do if you have 1 extra hour):

- Add 2-3 sentences on the homepage that say exactly who Svivva is for
- Add a simple pricing page — people need to see a price before they sign up
- Put your name or face somewhere — people buy from people, not faceless tools
- Set up an email waitlist capture (even a Google Form is fine)

Already done — no action needed:

- Live API endpoints, public API cards, shareable URLs
- SEO infrastructure seeded with content
- APEX autonomous improvement system running
- Stripe and auth both live

HOW TO GET TRAFFIC

You do not need to do all of these. Pick 2-3 and do them well.

1. Mini Apps pointing to Svivva (Your Biggest Lever)

- Add a small "Powered by Svivva" link in the footer of every mini app you have
- Add one CTA: "Build your own AI API - try Svivva free"
- Mini apps rank on Google for their own keywords — their visitors then find Svivva
- This is a compounding loop: more mini apps = more traffic to Svivva, automatically
- No other AI API platform has this distribution advantage. Use it.

2. Post one piece of content per day for 2 weeks

- Twitter/X: "I built an AI API that improves itself from real traffic" — show a demo
- Reddit: Post in r/SideProject and r/webdev — show APEX promoting a new prompt live
- LinkedIn: "I shipped a feature that does not exist anywhere else — here is what it does"
- Indie Hackers: Post your honest story — people love "I was scared but launched" posts
- Goal: not to go viral. Goal: 100 people try it, 5 pay you. That is enough.

3. Submit to directories (2 hours, one-time)

- Product Hunt — schedule a launch day, post at 12:01am PST
- AlternativeTo.net — list as alternative to Postman and OpenAI Playground
- Futurepedia.io — massive AI tool directory, free listing
- There Is An AI For That (theresanaiforthat.com)
- SaaSHub.com — developer audience, your ideal customer

4. SEO — already built, just feed it content

- Your blog and /tools pages are live — just add one article per week
- Target keywords: "build ai api without code", "prompt to endpoint", "openai api wrapper"
- One article that ranks = 100+ free signups per month for years
- Use your Keyword Planner dashboard inside Svivva to manage this

5. Show the product working — 60-second video

- Record your screen: type a prompt, watch the API deploy in 60 seconds
- Post this video everywhere — this is your #1 conversion tool
- Put it directly on your homepage, above all other text
- A working demo beats 1000 words of copy every single time

HOW TO MAKE MONEY

The path to \$1,000/month:

- Free tier: 3 APIs, 1,000 calls/month — gives people a reason to sign up with no risk
- Pro tier: \$49/month — this is where your revenue comes from
- Founding Member offer: \$29/month for life for your first 10 customers (creates urgency)
- Enterprise: one deal can equal 10+ Pro users — reach out to startups directly
- Marketplace: take 20% of every API transaction between sellers and buyers

Revenue math — what it realistically looks like:

Month 1 \$98 2

paying users.
Proves it works.

Month 2 \$245

5 paying users.
First real
traction.

Month 3 \$735

15 paying
users. Ramen
profitable.

Month 6

\$1,470 30

paying. Mini
apps flywheel
starts.

Month 12

\$3,920 80

paying + one
enterprise deal.

WHAT IS TECHNICALLY STILL MISSING

These are real gaps. None of them should stop you from launching today.

[HIGH] Pricing

page People
need to see a
price before they
sign up

[HIGH]

Onboarding

flow 3-step
wizard to create
your first API
would help new
users

[HIGH] Email

notifications

APEX should
email you when it
promotes a new
prompt

[MEDIUM]

Usage

dashboard for users

Users want to see how many calls their API has served

[MEDIUM]

Billing portal

Stripe has a one-line integration so users can manage plans

[MEDIUM] API

key auth on /api/run

Open endpoints will be abused at scale — add key auth soon

[LOW] Better error messages

Raw JSON errors need a friendly UI

[LOW] Mobile layout polish

Dashboard works but some pages need small-screen fixes

[LOW]

Automated

APEX cron job

Currently manual trigger — a cron job makes it truly autonomous

YOUR ACTION PLAN — THIS WEEK

Do this in order. Do not skip steps. The order matters.

TODAY

- Re-deploy the app and confirm it loads at the new URL
- Send the link to 3 people you know and ask them to try building an API
- Record a 60-second screen recording of the product working

TOMORROW

- Post the recording on Twitter/X and LinkedIn with the story behind it
- Schedule a Product Hunt launch for 3 days from now
- Add a pricing section — even plain text with 3 tiers and prices

DAYS 3 AND 4

- Add "Powered by Svivva" with a link in every mini app you have
- Submit to 5 directories: Futurepedia, SaaSHub, AlternativeTo, TAAFT, BetaList
- Post a genuine "I built this" story on Indie Hackers

DAYS 5 TO 7

- Reach out to 10 developers — offer free Pro for 30 days in exchange for feedback
- Fix the top 2 issues that broke during testing
- If even 1 person signs up — you have proved it works. Keep going.

The only wrong move is waiting longer.

You built something real. Ship it.
