Weekly Rhythm

You have deployed Svivva — the hard part is done. This playbook walks you through every remaining action in priority order. Complete Phase 1 today and you will appear in Google within 48 hours. Phase 2 builds compounding traffic over the first 30 days. Phase 3 turns that traffic into a self-reinforcing growth engine.

3

subdomains
to wire up

12

Orbit steps
to run once

48h

11

compounding
traffic

Phase 1 — Domain & DNS (Do This First)

Your Svivva app is live at `svivva.replit.app`. Now you need to point `svivva.com` and all three subdomains at the correct Replit repls. These DNS changes typically propagate within 10–30 minutes on GoDaddy.

1A — Root domain: `svivva.com` !' Svivva app

In GoDaddy DNS Manager, add or update the following records:

Record Type	Name / Value
CNAME	<code>www</code> !' <code>svivva.replit.app</code>
CNAME (or A)	<code>@</code> !' <code>svivva.replit.app</code> (or Replit IP)

1B — Pyracrypt subdomains (all 3 at once)

Open Orbit !' Tools Repl tab !' run the 'Set Up All 3 Subdomains' step. It calls the GoDaddy API and creates all three CNAMEs automatically. If you prefer manual:

Subdomain	CNAME Target
<code>apps.svivva.com</code>	<code>cyber-security-mini-apps-zip.replit.app</code>
<code>security.svivva.com</code>	<code>new-venture-pipertzion2.replit.app</code>
<code>pyracrypt.svivva.com</code>	<code>new-venture-pipertzion2.replit.app</code>

1C — Enable custom domain in each Replit

- Svivva repl !' Secrets !' `NEXT_PUBLIC_SITE_URL` = `https://svivva.com`
- Open each repl's Settings !' Custom Domain !' paste the matching subdomain
- Replit will auto-provision a free TLS certificate within ~5 minutes
- Verify with: `curl -I https://apps.svivva.com` (look for 200 OK)

1D — Verify everything works

```
# Run these in your terminal to confirm all four endpoints are live
curl -I https://svivva.com
curl -I https://apps.svivva.com
curl -I https://security.svivva.com
curl -I https://pyracrypt.svivva.com
```

Phase 2 — Orbit SEO Launch (12 Steps, Run Once)

Orbit is your automated marketing engine at /dashboard/launchpad (admin only). It creates and indexes hundreds of SEO pages across svivva.com and your tools Repl. Run every step in order — most complete in under 60 seconds.

Tab 1 — svivva.com SEO

- 1 IndexNow Submit**
Instant ping to Bing, Yandex, and Google Discover — your sitemap is live worldwide in minutes
- 2 SEO Landing Pages**
Auto-generates 15+ keyword-targeted pages: 'AI API builder', 'no-code API', 'hardware builder AI', etc.
- 3 Directories**
Submits Svivva to 40+ SaaS directories: Product Hunt, Indie Hackers, Betalist, There's An AI For That
- 4 AEO Pages**
Answer Engine Optimisation — structured Q&A pages for ChatGPT / Perplexity citations
- 5 Blog Posts**
Generates 5 SEO blog posts with proper meta, OG tags, and internal links
- 6 Comparisons**
Creates vs-pages against competitors: 'Svivva vs Zapier', 'Svivva vs OpenAI API'
- 7 Social Launch**
Drafts Twitter/X thread, LinkedIn post, and Reddit r/SideProject post for copy-paste launch

Tab 2 — Your Tools Repl

- 1 Paste Repl URL + Scan**
Enter your deployed Pyrecript Repl URL and Orbit discovers all tools automatically
- 2 Generate SEO Pages**
Creates 4 SEO pages per tool on svivva.com — each links back to the real tool on your Repl
- 3 Hub Page**
Builds a /tools landing page listing all your tools — perfect for Google indexing
- 4 Embed Widget**
Generates a JS-embed snippet so the tools can appear inside svivva.com iframes
- 5 Set Up 3 Subdomains**
Auto-creates all 3 GoDaddy CNAMEs in one click (see Phase 1B)

Phase 3 — Google Search Console & Indexing

Without telling Google you exist, it can take months to be indexed. These steps cut that to 24–72 hours and set you up for long-term ranking.

3A — Verify ownership (one-time, 5 minutes)

- Go to search.google.com/search-console ! Add Property ! URL prefix ! <https://svivva.com>
- Choose HTML tag method — Svivva's <head> already renders custom meta tags
- Add the tag to `app/layout.tsx` inside the <head> export or as a Next.js metadata verification field
- Click Verify — you should see 'Ownership verified' immediately

3B — Submit your sitemap

```
# Your sitemap is auto-generated at:
https://svivva.com/sitemap.xml

# Submit in Search Console:
# Sitemaps ! Enter 'sitemap.xml' ! Submit
```

3C — Request indexing for key pages

After submitting the sitemap, manually request indexing for your highest-value pages:

- svivva.com (homepage)
- svivva.com/blog (blog index)
- svivva.com/tools (tools index)
- svivva.com/seeds (Seeds product page)
- apps.svivva.com (Pyracrypt tools hub)

3D — IndexNow API key (already wired in Orbit)

Orbit's 'IndexNow Submit' step pings all major engines instantly. Ensure `NEXT_PUBLIC_SITE_URL=https://svivva.com` is set as a Secret so the ping uses your real domain, not the `.replit.app` URL.

Phase 3E — Rank Tracking (Week 2+)

Tool	What to track
Google Search Console	Impressions, clicks, avg. position per page
Google Analytics (free)	Sessions, bounce rate, top landing pages
Ahrefs / Semrush (free tier)	Keyword rankings, backlink growth
Twitter/X search: 'svivva'	Brand mentions — reply fast to build community

Phase 4 — Content & Social Launch

4A — Day-1 launch posts (copy from Orbit !' Social step)

Orbit generates ready-to-paste social copy. Use these channels in this order for maximum launch-day visibility:

Hacker News

[Show HN: I built ...](#)

Post at 9am Eastern on a weekday. Keep title under 60 chars. Respond to every comment within the first 2 hours.

Product Hunt

[Full product page](#)

Prepare 3–5 screenshots, a 60-sec demo GIF, and a clear tagline. Ask your network to upvote on launch day.

Twitter / X

[Thread \(8–12 tweets\)](#)

Start with the problem, not the product. End with a CTA link. Pin the thread to your profile.

LinkedIn

[Founder story post](#)

Personal angle outperforms feature lists by 3–5×. Share what you learned building Svivva.

Reddit

[r/SideProject, r/webdev](#)

Give value first. Show the tech, not just the URL. Include a code snippet or demo GIF.

IndieHackers

[Milestone post](#)

Post 'I launched X after Y weeks'. The IH audience is highly engaged with early-stage tools.

4B — Email list (Seeds funnels)

- Open Seeds !' create a new funnel for 'Svivva Early Access' + 'Pyracrypt Beta'
- Embed the waitlist form on your homepage (already integrated in Seeds marketing panel)
- Send a welcome email sequence: Day 0 confirm, Day 1 value tip, Day 3 feature highlight, Day 7 upgrade nudge
- Target: 100 emails in week 1 from launch posts !' 10% will convert to paid

Phase 5 — Pyracrypt !" Svivva Cross-Traffic

Every Pyracrypt visitor is a potential Svivva user and vice versa. These bridges maximise the value of both audiences.

5A — Pyracrypt !" Svivva flow

- Add a 'Built with Svivva API' badge + link in every Pyracrypt tool footer
- On tool result pages: show a CTA — 'Build your own AI tool !" svivva.com'
- Pyracrypt login page: 'Create APIs like this one on Svivva'
- Include Svivva in Pyracrypt's about/docs pages as the backend engine

5B — Svivva !" Pyracrypt flow (already in Orbit)

- Orbit mini-app flow creates 4 SEO pages per Pyracrypt tool on svivva.com
- Each page links to the live tool URL at apps.svivva.com or security.svivva.com
- The Hub page at svivva.com/tools lists all 50+ Pyracrypt tools
- Blog posts reference Pyracrypt security tools as worked examples

5C — Shared keyword targeting

Target keyword	Which page ranks
AI cybersecurity tools	svivva.com/tools + security.svivva.com
free password strength checker	apps.svivva.com tool page
API builder for security apps	svivva.com SEO landing page
no-code encryption API	svivva.com/[slug] Orbit page
Pyracrypt alternatives	svivva.com comparison page (from Orbit)
build cybersecurity tools with AI	svivva.com blog post

5D — Backlink exchange

Contact 5–10 cybersecurity bloggers / tool review sites and offer a free Svivva Pro trial in exchange for a review post that links back to svivva.com. One DA-40+ backlink is worth more than 100 social posts for Google ranking.

Weekly Traffic Growth Rhythm

Consistency beats any single tactic. Follow this rhythm and your organic traffic will compound 20–40% month-over-month within 90 days.

Week 1

- Complete Phase 1 DNS setup — all 4 domains live
- Run all 12 Orbit steps (svivva.com tab + Tools Repl tab)
- Submit sitemap to Google Search Console + request indexing for 5 pages
- Post on Hacker News (Show HN), Product Hunt, Twitter, Reddit
- Set up Google Analytics and Search Console monitoring

Week 2

- Publish 2 blog posts via Svivva Dashboard !' Content (use AI generation)
- Check Search Console — you should see first impressions appearing
- Run Orbit again to generate 5 more comparison / AEO pages
- Reply to every comment/mention on your launch posts
- Submit to 10 more directories (BetaList, AlternativeTo, SaaSHub)

Week 3

- Publish 2 more blog posts — focus on long-tail keywords from Search Console
- Start a 'Building Svivva' thread on Twitter — weekly update format
- Reach out to 3 podcast / newsletter hosts for feature opportunities
- A/B test your homepage hero copy (use Svivva's own Hypothesis Lab)
- Check Seeds funnel metrics — optimise the email sequence open rates

Week 4+

- Repeat: 2 blog posts/week + 1 social post/day minimum
- Build 1 new free tool / mini-app per week to generate new SEO pages
- Monitor top 10 ranking keywords and create deeper content for each
- Start affiliate / referral program for power users to share Svivva
- Review Pulse dashboard — double down on highest-converting pages

Required Secrets & Environment Variables

These must be set in Replit Secrets (not .env files) before deploying. Missing any one of these will silently break a feature.

Secret Name	Where to get it / what it does
DATABASE_URL	Auto-set when you provision a Replit PostgreSQL database
OPENAI_API_KEY	platform.openai.com !' API keys — powers all AI features
NEXTAUTH_SECRET	Run: openssl rand -base64 32 — any random 32-char string
NEXT_PUBLIC_SITE_URL	Set to: https://svivva.com (not the .replit.app URL)
GODADDY_API_KEY	GoDaddy Developer Portal !' My Keys — needed for auto-DNS
GODADDY_API_SECRET	Same page as API key — the paired secret
STRIPE_SECRET_KEY	Stripe dashboard !' Developers !' API keys !' Secret key
STRIPE_PUBLISHABLE_KEY	Stripe dashboard !' Developers !' API keys !' Publishable key
STRIPE_WEBHOOK_SECRET	Stripe !' Webhooks !' Add endpoint !' svivva.com/api/stripe/webhook

Quick-Verify Checklist Before Every Deploy

- Run: `npx tsc --noEmit` !' zero errors
- All required Secrets set in Replit (list above)
- `NEXT_PUBLIC_SITE_URL` = <https://svivva.com> (not .replit.app)
- `DATABASE_URL` is set !' database:push will run automatically at build
- Svivva dev server starts clean (no red errors in workflow log)
- Visit /blog and /tools — both load without 500 errors
- Visit /dashboard — redirects to login (not a crash page)

Quick Reference — All Key URLs

URL / Location	Purpose
svivva.com	Main app — homepage, dashboard, blog, tools
apps.svivva.com	Pyracrypt mini-apps (50+ cybersecurity tools)
security.svivva.com	Pyracrypt main app (full platform)
pyracrypt.svivva.com	Pyracrypt alias / direct brand URL
svivva.com/sitemap.xml	Submit this to Google Search Console
svivva.com/dashboard/launchpad	Orbit — SEO automation (admin only)
svivva.com/dashboard/marketing	Marketing AI — generates copy & campaigns
svivva.com/seeds	Seeds — multi-app builder & waitlist funnels
svivva.com/blog	Blog — SEO content hub
svivva.com/tools	Tools index — all mini-app SEO pages
search.google.com/search-console	Monitor Google rankings & index status
analytics.google.com	Traffic analytics
hello@svivva.com	Support / business inquiries

30-Day Traffic Goal

Metric	Day 7	Day 30
Organic impressions	100–500	2,000–8,000
Organic clicks	10–50	200–800
Indexed pages	20–40	80–200
Email signups	20–60	150–400
Paying users	0–3	5–20
